The diagram shows a power distribution system with 12 miniature circuit breakers (MCBs) connected in parallel to a main supply busbar. The busbar is labeled with terminals 1 through 12 from right to left. Each MCB is labeled 'NH-LA-LEI-2N' and has a 'G' symbol. The bottom of each MCB is connected to a common neutral busbar, which is grounded at the far left. The diagram illustrates the wiring for a 230/400V system.
